Potential Impact and Damage from a Tornado

Tornado Facts

- There is an average of 800-1,000 tornados in the United States each year.
- A tornado can last for more than 1 hour and produce wind speeds of over 300 MPH
- Tornados can occur at any time of the year, in any part of the United States.
- Approaching tornados have a loud roar similar to a freight train.

Where will YOU go in the event of severe weather or a tornado?

Introducing The Lifesaver Series

Lifesaver Storm Shelters™ offer safer, more comfortable shelters for our customers that they will actually use if severe weather strikes. Many concrete or metal shelters go unused by their owners because the interiors are often scary places. This defeats the purpose of having a shelter which you and your family should not hesitate to use during severe weather.

Other storm shelter manufacturers use wood, concrete or metal all of which over time will crack, leak, rot and rust allowing water, insects, rodents and snakes to enter the shelter as well as providing an environment for mold or mildew to thrive. Metal shelters can also be dangerous as they can conduct electricity from downed power lines or lightning. Our shelters are made of fiberglass, stainless steel hardware, and a plastic honeycomb composite floor system that won't rot, leak, or conduct electricity.

Standard features of our shelters include screened vents and door seals to keep out unwanted pests, non-skid steps, handrail, carpeting, molded bench seating and a glossy white gel-coat finish, similar to modern bathtub linings, for your comfort and safety. Easy to open multi-point door locking system with gas struts provides an easily accessible shelter for people of all ages.

Lifesaver Storm Shelters™ only protrude eight inches above the ground and can be installed in a single day in most cases without large machinery, meaning there is minimal damage to your lawn or property. As an optional feature, phone, cable / satellite TV or electrical wiring can be added to your installation for your comfort and peace of mind.

We encourage you to question our competitors' construction, features, and price and compare it with ours. We are sure you will find the perfect storm shelter to fit your needs and will appreciate the distinct advantage of becoming an owner of a *Lifesaver Storm Shelter*™.

STORM-TEK LS4
Seats Up To 4 Adults

Very Affordable!

With a seating capacity of up to four adults, this shelter is compact yet roomy and was built for places where space is an issue. The Storm-Tek LS4 is priced and sized perfectly for a couple or small family. Inside dimensions measure 4' long by 5' wide by 5'3" tall.

STORM-TEK LS6
Seats Up To 6 Adults

Best Seller!

Our Storm-Tek LS6 is designed to comfortably seat up to six adults. With its convenient size and affordable pricing, this is an ideal shelter for the family on a budget. Inside dimensions are 7' long by 5' wide by 5'3" tall.

STORM-TEK LS10
Seats Up To 10 Adults

With comfortable seating of up to ten adults, this shelter is an excellent choice for a large family. The Storm-Tek LS10 was selected by the U.S. Military and installed at base housing areas to protect the families of our men and women serving in the armed forces. Inside dimensions measure 6'6" wide by 8'6" long by 6'1" tall.

STORM-TEK LS12
Seats Up To 12 Adults

Best Value!

With seating of up to twelve adults, this popular model is a variation of the LS10 but with the stairs located at the end of the unit allowing for more seating and free floor space. Inside dimensions measure 6'6" wide by 8'6" long by 6'3" tall.

STORM-TEK LS20
Seats Up To 20 Adults

Great for Businesses!

Our largest shelter is able to comfortably accommodate up to 20 adults. This model is an excellent choice for large families, day care centers and small businesses with less than 20 employees. Even though this model is the largest we offer it can still be installed in one day in most cases. Inside dimensions are 6'6" wide by 14'9" long by 6'3" tall.
